

Applications

Industry / Customer Group	Miscellaneous – Plastics mill
Application	Level detection
Country	Finland
Product	SpaceMaster 6000
Variations	SpaceMaster 7000 or 8000

Application

Details

In this plastics mill they use Telco sensors throughout the production process, wherever optical detection is needed. These photos show the 6000 series used as level detection of the plastic waste which is left after cutting the plastic to specified measurements.

The sensors are mounted in thru beam mode, looking across the width of the guide tube. If the beam is broken then the bag is full and the conveyor stops input into that bag, moving along to the next one.
