Application

Details

Another successful sweet application for Telco!

In this chocolate factory the customer is using the SMP 8500 MG J.
The SMP is mounted on one side of the roller to detect the presence of chocolate.

The SMP is set to Normally Closed. It has to be adjusted to not detect the chocolate layer on the roller within a distance of between 150 mm – 180 mm.

When the chocolate is not present, i.e. feeder is empty, the SMP will detect the roller (shiny surface) and it will activate the output, stopping the roller immediately.
