Application

Details

SM 6000 Series detecting fish cans.

Although this environment is clean, the sensors were repeatedly splashed with the oil from the cans. This was causing several detection problems and therefore, shutdown times in the production line.

SM 6000 Series has been tested for several weeks, with great results.

More than 50 sets have been replaced with Telco; and now, the ratio of stoppages for maintenance has been reduced virtually to zero.

Once again, a customer satisfied with Telco performance.
