

Applications

Customer Group	Agriculture
Country	Belgium - Holland
Product	SM 6000
Variations	SM 7000 / SM 8000 / SM 9000

Application

Details

3 sets of SM 6000 are mounted on a potato planting machine to detect the potatoes as they are dropped from a bin above.

The SM 6000 verifies whether a potato falls or not. Lack of detection indicates the hopper is empty, or there is a jam or other fault. Effectively detecting the potatoes and preventing “skips” leads to better crop yield and higher quality potatoes.

This application has also been applied to other crops with similar planting methods.
