

Applications

Industry / Customer Group	Wood / Paper / Textiles
Application	Sawmill
Country	Finland
Product	SPBS 2602 J
Variations	

Application

Details

In this application we had to detect the position of the log so it would be handled correctly further along the system. As you can see in the picture, directly under the log there can be different colours and the frame of the machine is shiny metal. The problem was also that we could only use the free space between the rollers and the frame.

Due to the harsh environment and the shiny background we decided to use the SPBS. This was a very good solution because after 3 weeks we could see that the SpacePak was contaminated with grease and sawdust but was still working without having to modify the sensitivity.

So, this proves once again that the SPBS can also work in very harsh environments without any problem.
